

# GreenHere Tree Inventory Summary

- 35% of all inventoried trees are made up of only 3 species: Manitoba maple, Norway maple and Tree of Heaven (all invasive alien species).

Increased planting is not as important as increased care of current trees.

- Only 12% of smaller trees (<20 cm DBH) are showing low to high defoliation. Over 30% of larger trees (>30cm DBH) have low to high defoliation. This suggests that with time that these larger trees will contribute less to overall canopy cover and associated benefits.
- Many of the current trees have conflicts with structures, wires, or sidewalks.
